

Summer Internship - Software Engineering Intern (Consulting)

About the Internship

The Global Services internship program is a 12-week session that will give our graduating students a jump start in learning Java Enterprise technology and development. With frequent collaboration among themselves and demos to their mentors and internal project stakeholders, interns will also develop soft skills that are crucial for personal success.

The internship is hands-on, rigorous, and fun - but that's largely dependent on you. Go big or go home, we always say. The internship is also designed as a sort of "boot camp" so that those who excel will be eligible for a full-time offer at the end of their internship.

Requirements

- Love learning by being thrown in the deep end of the pool
- Hard worker
- Already graduated or graduating within the next year (junior or senior standing)
- Able to work 40 hours per week
